Mid –Term Evaluation of the CEOSS Implemented
Enhancement of Primary Education in 10 governmental Primary Schools
In Suhag Governorate Project
Prof: Salwa AbdelBaki: Helwan University, Faculty of Education

September, 28, 2003

Enhancement of primary education in governmental primary schools is a challenge, as the government has the upper hand in deciding all basic factors of educational process in such schools. Curricula cannot be changed. Teachers have to be taken as given.

Methods of teaching are also predetermined if not by previous governmental training, there are traditions of teaching followed in all governmental schools. As such, enhancement should be understood in relative terms, and highly optimistic objectives should be cautiously approached.

The research evaluated project accomplishments, including;

1- Physical conditions of the schools are improved.

2- Performance of 350 school staff is improved.

3- Review implementation strategy and provide recommendations.

4- Review potential sustainability of school development

Coping Strategies of Egyptians and Their Personality Characteristics

Prof: Salwa AbdelBaki & Lamise Mansour

Department of Psychology, Helwan University

Egypt

29th Stress and Anxiety Research Conference (STAR) 16-18 July 2008 - Birkbeck University of London - UK. http://www.bbk.ac.uk/psych/star

In this study the researchers are interested in knowing what strategies Egyptians youth are using to deal with everyday life pressures. Fundamental techniques used to measure dealing with pressure are emotional, and task avoidance oriented strategies. The researchers selected a sample of 500 youth with different educational backgrounds and ages. A scale was designed for testing the effects of these variables as well as the gender and specialization effect. The scale includes several aspects of pressures that are normally generated in actual life.

The aspects of the scale included emotional - social, economic, job, health, educational, family and general. Along with the coping strategies scale a personality inventory was also applied on 362 students studying in the area of education. The results were analyzed according to psychological and social theories.

Key words: Avoidant, emotional, solving strategies

Mutual Visions of Death Anxiety Among Socio-Economic Segments of People

Abdelbaky Salwa

Helwan University, Egypt

21th st International Conference of The Stress and Anxiety Research Society (STAR)

Bratislavia, Solovakia, Institute of Experimental Psychology

20-22, 2000

The problem of life and death has raised the attention of philosophers and thinkers and has taken up much of their thinking. In the meantime, the concept of death is also related to many strong emotions that may have impact on psychic and mental health of ordinary people. The present research is an attempt to discover facts about relation of socioeconomic segments of people concerning this type of anxiety. Data will be collected from a sample of Egyptians, through interviews by open questions about the relevant respondents visions. Research methodology will be based on content analysis, which will be applied to the verbal content of respondents vision.

Key words: mutual visions – Death anxiety – socioeconomic segments

The Psychic Costs of Seperation of Children from Their Fathers

A Qualitative Analysis of Responses of children Who Live in Separated Famillies

Center For Egyptian Women Legal Advice

By: Prof: Salwa AbdelBaki:Helwan University

Faculty of Education ,Mental Health Department

CEWLA

2009

The researcher aimed to know the psychic cost of children who live in separated families.

This psychic study will not try to estimate a quantitative cost by applying a projective technique which allows an in depth study of the child psychology to identify the negative effects that divorce has left in children which if not treated will inevitably to their psychic structure deformation . we say about this that the child projects his feelings on the picture.

The research stimulates by his questions more meanings that the picture raises in the child’s mind. the main results show these points:

1-the father’s absence and reliance on mother.

2-father is the source of power.

3-children’s perception of the conflict.

4-latent wish to regain unity.

5-conflict ,fear and aggression.

6-emotional hunger.

7-lonliness&loss of love and security.

Reform of Technical and Vocational Education and Training System

The Ministry of Housing In Cooperation With the TVET Program.

A Report on the Field Research of The Reasons for youth Avoidance of Working in the Construction Sector

By Dr. Salwa AbdelBaki

May (2009)

The purpose of this study was to get an answer to the question: Why youth are not enthusiastic about working in the construction sector? Expert views were explored, a field research on a sample of youth was organized in three governorates, Cairo, Assuit, and Alexandria. Discussions were also organized with focus groups of work supervisors and workers from some contractor companies. Discussions were also organized with trainers in training centers with the sector.

The youth sample consisted of 720 individuals from the three governorates, aged 16-38 with different educational levels. Responses of this sample were descriptively analyzed and three sub-samples were compared. The method of content analysis was used to analyze expert views and the responses of supervisors, workers, and trainers focus groups. The analysis ended with the findings.
